there are at least two very interesting articles in this issue. One related primarily to CVD, risk factors and biomarkers and the other related to mechanisms of addiction . Oh and as an entertaining freebe on page 112 one of my dearest colleaques is in an add under fuzzy logic, can you quess who it is? Starting on page MH-1 is a piece on staying alive purporting to deal with new developments, .Though it is the special advertising section I think the CVD wonks might find some of the information useful. Nice info on crp, anti-inflam. There may not be much new but it still is interesting.The addicted brain by nestler and malenka starting on page 78 is very very very interesting and has lots of great pictuures and information. It might be worthwhile to have a seminar on this.? Richard
